forth to South Americans wishing to pursue higher work in engineering than their own country could offer to them. A circular was prepared and the South American alumni notified, so that a series of Technology reunions have begun along the route of the party.

The chief permanent feature of the extension of education is a neat little brochure in Spanish illustrated with a color view of the New Technology, towards South American students.

A certain noted authority has spoken of this as follows: "The preparation of just this kind of circular is one of the matters that Tech has taken up and developed in regular fashion. It has realized that this country leads the world in methods of technical education to produce just what the Institute has to offer and information how to get further particulars. The draft of the work was outlined by President Mvaclaurin and the phrasing was passed by Professor Ernest F. Langley and rushed through the press in order to catch the steam-clout of this as follows: "The preparation of just this kind of circular is one of the matters that Tech has taken up and developed in regular fashion.
