ATHLETIC COUNCIL
Alumni Advisers Award Letters
To Wrestlers—Runners
Considered.

The Advisory Council on Athletics met last night at the Technology Club. The business that was transacted concerned the wrestling team, the recent class cross country meet and the records made in the dual meets with Holy Cross and Bowdoin.

Loo, Giles and Hoffman were awarded T's in recognition of their successful work. W. C. Wood, Capt. Crowell, Melhina, Goodell and Manager Morse were given their T's.

A special ruling was made concerning the recent 1917-1918 cross country race in which a man was lacking in the Sophomore team from the usual squad of six. The ruling for this special case is that the score shall be computed with this sixth man in twelfth place. On this basis the freshmen are given their laurels for this race. The revised score will be published in Friday's issue.

Consideration of the records made by contestants in the late dual meets, the ruling on Respect to awarding letters, will come up at the next meeting of the Committee.

ATHLETIC ASSOCIATION

CLASS BASEBALL
The Sophomore and freshmen baseball teams will meet tomorrow afternoon for the second time. The same is to be played at the Fenway Play-ground behind the Art Museum at 3.30 o'clock. Cady is scheduled to pitch for 1917 and Ryan or Wilson for 1918. Both teams have been playing good ball and a much better game should come about than the last one which the freshmen won.

CLASS DAY COMMITTEE
The meetings scheduled for 4.30 to- day will be held at 5 in Engineering B.

SEWAGE EXPERIMENT STATION INSPECTED
Class In Municipal Sanitation Visits Plant At Lawrence.

Last Monday afternoon the class in Municipal Sanitation, accompanied by Professor Gunn of the Department of Biology, made their annual visit to the sewage experiment station at Lawrence.

This station, which is one of the first of its kind in the country, is run by the State Board of Health. Its purpose is to filter for city use water from the Merrimac River, which is highly polluted owing to sewage deposits. The filtration is accomplished by means of a slow sand filtration system, which is shown to be very efficient by the mortality tables. Since the early nineties, when this process was introduced, the population of Lawrence has steadily increased but the death rate on the contrary has actually decreased.

During the inspection the students were given a lecture explaining the two sets of filters, which are so arranged that either may be operated independently of the other.

SALES MAN WANTED—For type-writer specialty, $25 week and up. For summer season or permanent position. Call 5 P. M. Wednesday. Munson Supply Co., 141 Milk St., Bos-ton.

BURLINGTON-FURBER COAL CO.
50 Congress St., Boston.

High Grade Anthracite Coal
for Domestic Use.

Our Crosser-Foehnichs Brilliant supplied to the Institute.

M. I. T. A. A. in Room 8, Eng. C, tomorrow at 5 o'clock.
