To the Editor of The Tech:

The Engineer Corps wishes to express its regret that its last two lectures have conflicted with meetings of other prominent Institute activities, though the conflicts were unfortunately unavoidable. Dr. Morton Prince was originally scheduled for Monday afternoon, but was suddenly called to New York, leaving the only available time for his lecture on Thursday. Captain Davis could also speak only on a Thursday afternoon. Since both men had been authorized in their particular lines, the opportunity to get them was considered too good to lose. In the future the lectures will be given on days when no conflicts can occur.

Incidentally, no notice of the Institute Committee meetings was posted on the calendar, probably through some oversight.

The Engineer Corps desires the cooperation of all students and all the activities and the desires to work for their welfare.

Respectfully yours,

THE COMMITTEE IN CHARGE.

Mr. Brewer Eddy Explains Labor Conditions

The second of the series of lectures on "Jobs in Foreign Countries" was delivered yesterday by Mr. Brewer Eddy of the Board of Foreign Missions. He chose as his subject, "Pioneers of Civilization." Mr. Eddy spoke of the close connection between the engineer and the missionary, who, he said, are the forerunners of civilization. At present several missionary groups have been sent out from foreign countries, whereas the business man is the last in and the first out in times of trouble. The business man has never paid his debt to the missionary, who has opened up every country to which he has gone, and is the forerunner of all education and uplift. The engineer spoke of Turkey and China from which are given examples of the great work that missionaries are doing for the cause of civilization. In all countries there is a need of missionaries to help teach the people what has been learned through the schools and colleges in the West. The engineer explained how the missionary goes about his work and the importance of his position.

The lecture was well attended, and the audience showed their appreciation of the fine work that is being done.

FINANCE public utility developments.
