M. E. SOCIETY SEES WATCHES MADE

Visits Waltham Plant—Invited by American Society of Mechanical Engineers to Inspect Submarine—To See U-Boats Maneuver at Sea

OTHER SOCIETIES TO GO

About sixty members of the M. E. Society went on the trip through the Waltham factory last Thursday and Friday afternoon. The men were particularly interested in the showing of the parts of watches and in attempting to learn the methods, so different from those they were familiar with.

The members of the society have received an invitation to make an excur-
sion to the British Company factory last Saturday. The group will leave by train about 9:30 o'clock, and arrive at New London about 11:30 o'clock. The trip will be at the cost of the railroad company.

The party will leave the North Station Saturday morning, November 13. Those interested are asked to give their names to W. C. McHenry, of the American Society of Mechanical Engineers.

PROF. DODEN UPHOLDS WILSON
Professor Latimer's Expressions, His Political Views

At a meeting at the headquarters of the Massachusetts Wilson Progressives, at the Home, Prof. D. J. O. Prof. D. J. O. of M. E. prof. of commerce of commerce and national life, made a public speech in which he advocated the Democratic and Republican parties from the standpoint of experience, political philosophy and backing.

On the principle that the independent vote is the decisive factor in the campaign, Prof. Doden said that he was one who was responsible to his constituents rather than to his prejudices, who felt himself above party loyalty. In re-

ducing the candidates for presidency, he said both are men of radical character and ability, and if the choice were to be made on the basis of per-
cussion, he would vote for Wilson.

Professor Doden also stated that there are three tests to be applied in deciding whether Wilson or Hughes, and the answer is, political philosophy and leadership. Wilson has had real experience, while Hughes has not. The political idealism and methods of Wilson are in line with public opinion and the political curate, while Hughes are more solid. The political philosophy of Wilson will have little influence for progress in this country, while the political philosophy of Hughes will have double the effect. Wilson, however, is not the man to make a decision for the people. Doden said he was not proud to have been associated with the late Mr. Charles Evans Hughes, who was not a man to make a decision for the people. Doden said he was not proud to have been associated with the late Mr. Charles Evans Hughes, who was not a man to make a decision for the people.
