INSTITUTE LIBRARIES READY

(Continued from page 1)

librarian adjoins the Central Library. The Architectural Library is located on the third floor of the Rogers Building in Boston. It contains books and periodicals on architecture, building, decoration, landscape architecture, the history of art, and allied subjects; also a collection of photographs and lantern slides. The library is provided with an author catalogue, classified subject catalogue in a separate alphabet and a shelf list.

The Library of Biology and Public Health is located in the Central Library. It contains books and periodicals on general biology, physiology, zoology, botany, bacteriology, industrial biology, sanitary science and public health.

The William Ripley Nichols Chemical Library is now combined with the Central Library. There is a reading room, 4-258, in which general reference books and current periodicals are kept.

The Electrical Engineering Library is also in the Central Library except for a reading room, 10-211, containing reference books and periodicals.

The entire Civil Engineering Library is to be found in Room 1-290. This collection consists of books, periodicals, and reports on geodesy, surveying, civil and sanitary engineering and forestry.

The Mechanical Engineering Library is now in the Central Library.

The Rogers Geological Library, devoted to geology, mineralogy and paleontology, is principally in the Central Library, but a small working library is maintained in Room 4-344.

The Library of History and Economics is mostly in the Central Library except for some books on economics which are kept in the General Studies Library.

The Library of Mining and Metallurgy is at present in the Rogers Building, but will soon be accessible in the new Mining Building on the fourth floor. This collection consists of books on prospecting, mining, ore dressing, assaying, metallurgy, fuels and furnaces.

The Library of Naval Architecture and Marine Engineering is in Room 1-225. It contains books and periodicals on naval architecture, shipbuilding, marine engineering, naval history, warships, yachting and aeronautics.

The Physical Library maintains a small working library in Room 4-240. The rest of the books and periodicals on astronomy, physics, radioactivity, electrochemistry, the telegraph and telephone, optics, and other applications of physics are kept in the Central Library.

The Margaret Cheney Reading Room is located in Room 10-300. This room is provided with a small collection of literary, scientific and reference books for the use of the women studying at the Institute.

The Vail Library is temporarily located in the basement, Room 3-003. This valuable collection of electrical works was the gift of the American Telegraph and Telephone Company.

The General Studies Reading Room is in Building 2, No. 240. This provides a study room for freshmen and Co. XV men. The Runkle Mathematical Library is kept in this room.

In looking up a subject first consult the subject-cards in the Catalogue. When these are incomplete examine the Shelf List or the books on the shelves. Second, look for the subject in the encyclopedias, read the articles related to it, and look up the references there given. For a serious investigation the most important literature will be found in the periodicals. To find this look for the titles of articles listed in the bibliographical books for reference, e. g., Poole's Index, Reader Guide to Periodical Literature, Engineering Index, Revue de L'Ingenieur Fortschritt der Technik, etc. Recent text-books and important articles in the periodicals will usually contain valuable lists of previous publications. The library staff are constantly on the look-out for sources of information, and will be glad to help students and others engaged in the investigation of any subject. Sometimes books not in the Institute Library may be obtained from other libraries. By application to the Registrar students may obtain cards which will enable them to draw books from the Boston Public Library. Students taking Courses I, II, III and VI have full privileges in the Libraries of Harvard University.

BENEFACTORS HONORED

The names of Coleman Dupont and Augustus Lowell are being cut into the stone over the entrances to Buildings 1 and 2. The minor courts upon which the names face are to be known as Dupont Court and Lowell Court respectively. Both names are of men who have done much for Technology. Mr. Dupont, formerly connected with the great Dupont powder works, has given Technology over a million dollars at different times and has always taken the closest interest in Institute affairs. Mr. Lowell endowed the electrical engineering laboratories, which were later named in his honor; and also founded the Lowell Institute.

SMOKER WARMS DORMITORIES

(Continued from page 1)

of the results were disastrous to the facial beauty of the combatants. "Chick" Gager in particular drove home some haymakers which caused poor "Sturdy's" face to look like a raw steak. For the scientific boxing everyone had to bow to "Fat" Turner and "Bob" Thurston. These fellows were particularly well matched and their clever side-stepping and counter attacks won the praise of the audience. Chandler and Neuberg made things fly for the brief period that they were within the ropes and the murderous side-swipes delivered by the latter pugilist made their friends first gasp and then laugh, for all merely fanned the air over the head of the nimble "Kid."

Music also played a part in the entertainment and the Mandolin Club furnished several lively selections. "General Joffre" Loutski also "took a chance" and played the newest rag-

time hit, "Humoresque" and others upon his silver flute. Higgins and Dagnal, playing the mouth organ and the clarinet, led the singing of the "Stein Song" and "Take Me Back to Tech," while Tom Hannah rendered a touching little lullaby upon that most soothing of instruments, the bag-pipe.

"Packy" McFarland and "Al" Sanger furnished a very exciting bout on the mats and although neither wrestler succeeded in gaining a fall, their work was appreciated by the audience who watched the two light weights throw each other around with great delight.

The Longley Brothers and McAllister entertained with some card tricks and magic which were worthy of the vaudeville stage. Ask Miami Pierce whether they were clever or not. He was swindled out of a dime in a most admirable way.

After disposing of the comestibles and combustibles it was decided to give a vote of thanks to the committee in charge, consisting of "Tom" Hannah, "Jack" Babbitt, "Johnny" Barker, "Gloomy" Mayer and "General" Loutski, as well as to "Ray" Brooks, whose activities as master of ceremonies, kept things moving throughout the evening.

DELTA UPSILON HAS SMOKER

The first annual smoker of the Delta Upsilon Association, composed of fraternity members from all the New England colleges and universities, was held last Friday evening at the Harvard Club. In addition to the New England colleges represented, Marietta, Rutgers, California, Colgate, Michigan and Wisconsin also sent delegates.

The Technology and Tufts quartets rendered a musical program, and Judge Brackett of the Municipal Court gave several vocal selections.

STONE & WEBSTER

FINANCE public utility developments.
BUY AND SELL securities.
DESIGN steam power stations, hydro-electric developments, transmission lines, city and interurban railways, gas plants, industrial plants and buildings.
CONSTRUCT either from our own designs or from designs of other engineers or architects.
REPORT on public utility properties, proposed extensions or new projects.
MANAGE railway, light, power and gas companies.
