**'SILENT POLICEMEN' PLACED ON
DUTY ON MASSACHUSETTS AVE.**

As a result of the agitation on the part of the Institute Committee and Major Cole, a number of "silent policemen" have been placed where the car stops at the Corner of Massachusetts Avenue and Charles River Road. The posts have been placed at a distance of about five feet from the car tracks, so that pedestrians boarding and alighting from street cars are protected from vehicles passing the car. The posts are white and at night will carry a red and white lantern.

**TO WORK TECH SHOW
PICTURES IN SUNDAY**

Tech Show pictures will be taken this Sunday at Otto Sarony's studio, 146 Tremont Street. The picture of the Orchestra, however, will be taken at 9 o'clock, instead of at 9.30 as was previously announced. The cast, chorus and ballet will have their pictures taken at 9.30 instead of at 9, the management at 10. The pictures will be taken promptly and cannot be held up, as the Orchestra has a rehearsal at 10. On and after Monday of next week, all freshmen connected in any way with the Tech Show are excused from compulsory "gym."

About twenty-five men have reported at the Orchestra rehearsals, and Mr. Howard says that, considering the fact that the men have not rehearsed together before this branch of the Show is coming along in a very promising manner.

**H. B. RICHMOND TO ADDRESS
RADIO MEETING NEXT MONDAY**

The Radio Club will hold a meeting Monday, March 5, at 5 o'clock, in Room 1-150, at which time Mr. H. B. Richmond will talk. Mr. Richmond is an instructor in the Electrical Engineering Department and is well known to wireless amateurs through his articles on radio work.

It has been found impossible for the society to obtain a room in either the service building or the gas engine laboratory, and as a result the building next to the aerodynamic laboratory previously used for the storage of dynamite is now being partially remodeled for use as a place in which to install the club's apparatus. It is hoped that it will be possible to begin the actual work of setting up the instruments within two weeks.

**LITTLE CHANCE FOR NEW
ENTERPRISES IN INDIA**

The third talk in the T. C. A. series on "Jobs in Foreign Countries" was given last Wednesday afternoon by A. Farwell Bemis '93. The subject of Mr. Bemis' talk was "Commercial Opportunities in India." The Bemis Bros. Bag Co., of which Mr. Bemis is president, have several large factories in India and he is therefore familiar with the conditions there. The opportunities for Americans in India are limited in number rather than in extent, he said, because of the fact that most of the big concerns there are English and hence give preference to British subjects. He advised Technology men not to go unless they do so as emissaries of some established American firm. There are several large American concerns in India, among which are the Standard Oil Co. and the British-American Tobacco Co., as the most important. The former maintains a training school for those men which they expect to send to India.

The chief industries in India in the order of their importance are: agriculture, the manufacture of cloth, mining and the oil industry. The mining industry is by far the least developed of all and when it does open up there will be a great demand for engineers. There are large tin mines in the Malay Peninsula, which is very near India, that have recently come to be the world's chief source of tin.

The climate is not all that could be desired, nor are the living conditions, and Mr. Bemis said that he would not advise Institute men to go without a sort of missionary spirit. There are few white people there, which proves it's awful to some. Mr. Bemis' own company has sent many young men there and some of them have grown to like the country so well that they have decided to stay there—in Mr. Bemis' own words, "they have been captivated by the lure of the tropics."

CREW PRACTICE TOMORROW

(Continued from page 1)
fall. Among the new men Zur Welle and Bates are doing especially well, although neither of them had ever handled an oar before this winter. They are both strong candidates for berths in the first freshman eight.

Technology and Tufts are negotiating for a race in May and it is possible that several races will be held with the crews from the college on the hill during that month. The manager of the Technology Rowing Association issued the following statement yesterday: "It is necessary that every oarsman get out for practice at Newell boathouse on Saturday afternoon, as the crews will probably be on the river within the next few weeks. No man will be allowed to enter one of the boats until he has spent at least two practice periods on the machines and showed that he can handle himself in a boat. The class crews will be picked before the men go on the river so that it is necessary for every man to turn out as soon as possible, if he wishes to get in the first boat at the start."

CHEM. SOCIETY MEETS TONIGHT

Professors Spear and Moore to Address Society Tonight

One of the most important and interesting meetings of the Chemical Society this year will take place this evening at 7.30 in Room 2-190. At this meeting Professor Spear will give a very instructive talk on "Colloids." As the scope of this subject is too broad to be taken in full, Professor Spear will confine his talk to the most important phases which will be of interest to the society. Professor Spear is a recognized expert on this subject and recently lectured before the North-eastern Branch of the American Chemical Society, where his address was extremely well received.

Following this lecture will be a short talk by Professor Moore, the subject of which is as yet unannounced. In addition to these men, there will be other members of the Faculty present, who will be called upon to speak.

After these talks, plans for the coming season will be discussed. A splendid assortment of tips is being planned by those in charge. Among these are several trips to some nearby factories which will be of especial interest to chemists.

On account of this exceptional schedule the officers of the society have deemed it an excellent opportunity for certain students who are not already members to join the society and facilities for signing up will be provided at this meeting. After the meeting refreshments will be served in the Caf.

MURAD

THE TURKISH CIGARETTE

Murad advertising understates rather than exaggerates.

NOW, LISTEN!

The principal difference between Murad and most 25 Cent cigarettes is Quality—in favor of Murad.

Judge for yourself—Compare "Murad" with any 25 Cent Cigarette

Remember—Turkish tobacco is the world's most famous tobacco for cigarettes.

Everywhere—Why?

FIFTEEN CENTS
