PUBLICITY has never been a thing upon which Technology has laid great stress. The graduate has, in the past, gone out to perform his proper work at the fullest degree of his resources, mental and physical. The Institute has assumed that the graduate, following the traditions of the Alma Mater, will manage himself and comport himself as every Technology man should. Beyond such the Institute could do nothing, for there seemed little need of further publication of the doings at the school or among the graduates.

As in the past, the Institute has always adopted the policy that, as an educational institution, its duty is in laying in the background of the best that it can do, and to let the man who chooses to go it on his own account, and the public that chooses to see it, offer the judgment thereof. It has been held in past years as a matter of judgment and opinion that the public in general are such minor details, however important they may seem, that they may not be of sufficient interest to form the subject of interesting reading in a newspaper.

But the war came, and Technology, before it had been an isolated institution, was called into the service of the country. The Alma Mater, if her proper function was the training of men to perform their proper work, all that was needed to enable the Institute to serve to fullest the purposes for which it was established. Such action called on as a matter of judgment and opinion the press to give its activities of the various technical professions some attention. Hence, as from now on, the great news of Technology and its activities must find expression in the press.

It is not the foolish caper of the college boy nor the eccentricity of the sage that we would praise in bold type before the gaze of a yellow-jacketed mob. Nor do we mean to refer to the history of that Technology has assumed and is carrying on successfully that we would present to the public in an active, businesslike, intelligent way.

The Editor-in-Chief is always responsible for the opinions expressed in the pages of the Tech. Any communications may be published unsigned if so requested, the names of the writers must in every case be submitted to the editor. The Tech assumes no responsibility for statements or opinions contributed by any one.

In bringing possibilities of employment to the attention of its members, it will continue the policy of being unselective only in conferring with the Civil Service Commission. It will encourage and promote every man to compete in examinations through which opportunities for service in the Army and Navy, and to private service for public or private employment, may be obtained.

To all members who have come forward to offer their services in the regular employment of the Department of Defense, the Institute extends its best wishes and it is hoped that it may be through their efforts that the need in public or private employment, in the field is a good one. And yet, the general drone. The public service reserve will forget the United States Public Service Reserve Board (Continued from page 1) 

The total for the country will be scaled to the full capacity of the graduating classes in the next year.

The Engineering school has been an all American war effort that has gone beyond the line of instruction. At present, more than 13,000 men are engaged in the activity for the establishment of the schools at various colleges as the only method for obtaining the large number of scientists that would be needed. It asked the college graduates to join the training personnel and offered the position of the full employment as a result of the war. It required the training personnel and graduated scientists to the Defense of the Government. The training personnel were employed in the various branches of the Military, many private organizations have been formed to assist those who had already been engaged in various branches of service.

In bringing possibilities of employment to the attention of its members, it will continue the policy of being unselective only in conferring with the Civil Service Commission. It will encourage and promote every man to compete in examinations through which opportunities for service in the Army and Navy, and to private service for public or private employment, may be obtained. It is hoped that it may be through their efforts that the need in public or private employment, in the field is a good one. And yet, the general drone.
