The War-Time Tech

TECHNOLOGY itself is giving remarkably effective war service to the Country. THE ALUMNI in large and rapidly increasing numbers are in government or industrial work essential to war success. THE UNDERGRADUATES are efficiently fitting themselves for similar patriotic duty. "THE FRIENDS OF TECHNOLOGY" have organized to provide for men at the front. Already Institute men are in EUROPE, and Lansing '98 has arrived and opened a Technology center in Paris. The thousands of Technology men and the hundreds of thousands interested in the Institute should have news of all this and should have it promptly. THEREFORE the undersigned have co-operated to render this news service by making THE TECH the organ of ALL TECHNOLOGY for the period of the war.

The War-Tech Will Give:
NEWS straight from the live Alumni centre at Washington, in the heart of things.
NEWS from the fifty local Technology Associations all over the Country.
NEWS from the Technology centre in Paris, in touch with all those at the front.
NEWS from the Summer Camp, from Plattsburgh and from all other training camps where Institute men may be.
NEWS TWICE A WEEK, fresh, condensed, accurate, vital to every man and woman closely or remotely allied with Technology.

No Technology man can afford not to subscribe. Six months (36 issues) for $2.50; anywhere in the United States. For their own sake and to stand behind the great drive to put all the resources of Technology behind the United States and her Allies, we urge every Institute man to subscribe.

M. I. T. ALUMNI ASSOCIATION

Recruiting for the Army and Navy Air Services

The War-Tech, every Thursday, tells all the news of the war service, personal activities, recent developments, notes of the flying fields, acts of the fighting forces, and articles on military and naval aviation, photographs of special happenings throughout the World, progress and achievement in that and other fields of the new and rapidly changing science.

MARMON 34

The cylinders are hard iron sleeves fitting in to an aluminum cylinder casting. The pistons are of Lynite aluminum, increasing flexibility, reducing wear and lessening carbon deposit.

The entire motor is several hundred pounds lighter than the average motor in use today.

In short, the Marmom 34, through the whole-out, marks an advance in design that forecasts a new era.

You may prove the difference between the Marmon 34 and other cars in a single demonstration.
