INSTITUTE STARTS NEW CO-OPERATIVE COURSE WITH G. E. CO.

Course VI-A Will Graduate Electrical Engineers After Five Years With Degree of Master of Science

A course in industrial electrical engineering has been started at the Institute, similar to that already in operation in the different departments there have been a number of industries which have shown interest in the practical aspects of the profession. The new course is designed to familiarize students with the theoretical and practical aspects of electrical engineering and to provide them with the necessary knowledge and skills to enter the field.

The course will cover the study of electrical circuits, electrical machines, and power systems, as well as the design and operation of electrical equipment. The students will be exposed to the latest developments in the field, and will be encouraged to participate in hands-on projects and laboratory work. Upon completion of the course, students will be awarded a degree of Master of Science in Electrical Engineering.

The new course is open to students who have completed their undergraduate studies and are interested in pursuing a career in electrical engineering. The Institute will provide scholarships and other financial aid to qualified students who demonstrate academic excellence and a strong commitment to the field.

The new course will begin in the fall of 2023, and will be offered on a part-time basis to accommodate the schedules of working professionals. The Institute will also offer an online version of the course to students who are unable to attend classes on campus.

The Institute is currently enrolling students for the fall semester. Interested individuals are encouraged to contact the admissions office for more information about the new course and the application process.
