Experience and Equipment

These features stand for more in reinforced concrete than in any other field of building construction. Where else can you find such a record of progress and development, and a host of unique features that can be judged by the previous record of the enterprise?

The Massachusetts Institute of Technology

RICHARD C. MACLAURIN, M.A., Sc.D., LL.D.
President

The Massachusetts Institute of Technology offers courses, each of four years duration, leading to the degree of Bachelor of Engineering in Civil, Mechanical, Electrical, Chemical, and Sanitary Engineering; in Architecture; in Economics, Political Economy, and Public Health; in General Science and Engineering Chemistry, and Architectural Science; and in Engineering Administration.

To be admitted to the first-year classes, applicants must have taken at least a year's study of a high grade, and must pass satisfactory examinations in Algebra, Plane and Solid Geometry, Physics, English, History, French, and German, or French and Latin. In special cases, entrance examinations will be held later.

Graduates of colleges and scientific schools of collegiate grade are admitted, without examination, to such advanced standing as is warranted by their previous training.

Correspondence should be addressed to Prof. A. L. Merrill, Secretary of the Faculty.

PUBLICATIONS

The Annual Catalog (issued in December), the Report of the President (issued in January), the Programme (issued in June), and circulars in regard to Admission of Students from other Colleges, Summer Courses, Advanced Study and Research.

Any of the above-named publications will be mailed free upon application.

RECENT Y. M. C. A. BULLETIN DESCRIBES EXTENT OF SERVICE FOR SOLDIERS

A talking of the great work being done by the Y. M. C. A. in the interest of the American soldier, as long as the war lasts, is affected by the bulletin and issued by the National War Council of that organization. At Camp Deane at turn three buildings and about twenty more for the 43,000 men in that city affected by the military service. Out on the plateau of Westfield, trained in the blackboard of English, science, and physical education, and New London, are another thousand of soldiers preparing to leave for France at any minute. left of having a ready "smokes" or other glass, for interest, as well as being handy and ready for the first coming soldiers. The success of last year's experiments should be the outcome of the formation of the air services, and the previous opinion that there is a place for paper in the beginning of the new field. This opinion is, however, rather generalized than specific, and it is held by the Examiners Committee.

ART COLLECTION OF ALTON,

NEW ORLEANS, FOR RENT

Under the supervision of the Department of Architecture, there is being exhibited in the gallery of the Alton Art Museum, the collection of Mr. Kenneth E. Haskell. This exhibition is to continue until October 20 and will be open daily from 9:00 A.M. to 6:00 P.M.

Newark's oldest and most experienced mechanical engineers.

MARMON 34

All on Oil

Man is a machine—engine, boilers, cylinders and gears, and sometimes wheels and crankshafts. If you are going to get the best out of him you must rub him the right way, or in mechanical terms, "give him oil." To an automobile oil is as necessary as air is to man. And as the man gets the air automatically, just so should the automobile get the oil. That's what happens in a MARMON 34. Every moving part, from motor to axles, lubricates. Oil is fed to the bearings under pressure through a hollow crankshaft. See that the demonstrator explains this to you fully and accurately. Here, man shows how he works, for it is his most valuable feature. In a MARMON 34 a perfectly simple device, controlled by the throttle, automatically feeds the proper amount of oil to each bearing through the hollow crankshaft. Look before you buy.
