EFFICIENCY IN EDUCATION

In education, as in business, the trick is to get the biggest results with the least effort. This is the idea of the new policy which has been introduced by the Tech, and which promises to be a great blessing to the students.

A year ago, Technology would have thought it impossible to under-
take such an undertaking. Now, however, it is a housing of future aviators and naval officers in her new buildings.

Still more is to be done, however. For many hours of each pro-
cession, individuals in the costly apparatus owned by the Institute in-
lude, many of the class rooms are vacant, and the draughting rooms are unoccupied.

Efficiency in education means the utilization of all educational facili-
ties during all hours of the day. A greater extension of the evening
training must be provided to keep students busy all day.

Another move toward more complete efficiency was made by Tech-
ology when it decided to continue exercises for some of the classes throughout the summer months. Why should students lose much valu-
able time in their training just because it has been the custom of the
college authorities.
