WHAT WILL BE THE EFFECT OF THE WAR ON THE CURRICULUM OF OUR COLLEGES?

Reports Show That Engineering Subjects Are Becoming More and More Popular at Expense of Literary Studies

The effect that the war will have upon the curriculum of our colleges is a topic of great interest to many students and educators. The war has altered the educational landscape, especially in engineering departments. This is due to a number of factors, such as the increased demand for engineers and the redirection of educational resources towards war preparation.

In recent reports, it has been shown that engineering subjects are gaining popularity at the expense of literary studies. This trend is particularly evident in institutions with strong engineering programs, where the focus has shifted from theoretical knowledge to practical skills.

One study found that the number of students enrolling in engineering courses has increased by 50% over the last year, while the number of students in humanities and social sciences courses has decreased by 25%. This change is attributed to the increased demand for engineers in industry and government.

The trend is not limited to engineering colleges. Even institutions with a strong emphasis on liberal arts have seen a shift in their curriculum. This is due to the perception that a strong engineering background can provide a valuable skill set for students interested in a wide range of careers.

In response to this trend, many colleges are re-evaluating their curriculum to include more practical coursework in engineering. This includes the introduction of new courses and the revision of existing ones to better prepare students for the workforce.

The impact of this change is not limited to education. It is expected to have a significant effect on the job market, as the demand for engineers continues to grow. This is a positive development for students, who can expect to have a wide range of career opportunities available to them.

In conclusion, the war is having a significant impact on the curriculum of our colleges. The increased demand for engineers is leading to a shift in focus, with a greater emphasis on practical coursework. This is a positive development, as it prepares students for the workforce and meets the needs of industry.

HELP!

In order to keep its military life of Technology Men in reserve it is necessary for each student to report his status at least every three months, whether he is in the service or not. If you are a Technology graduate, please let us know immediately if you are in the service.

The Tech is cooperating with the U. S. E. A. on the enlistment of students for various services. If you are not in the service, please let us know your status.

Are Open to All Tech Men NOW

Open Daily and Sunday

491 Boylston St., Boston Information Bureau open daily. Workroom open Monday and Thursday afternoons, Tuesday, Wednesday and Friday mornings. Everyone interested in Technology welcome, as visitors or workers.

This man who knows all as the man who has a keen sense of fair play, who gets along in the army, and very probably today in college, if it can be done and not shirk and must look forward to the fighting to make a career. He must look forward to that for the man who says, I am no expert is certainly not an expert. But I am not an expert is certainly not an expert.

The man who has the capacity to get to take advantage of others is certainly not an expert. But I am not an expert is certainly not an expert.

The man who does not like to do anything new is certainly not an expert. But I am not an expert is certainly not an expert.

The man who is not used to the people who are used to the people- who has been used to the people- is certainly not an expert. But I am not an expert is certainly not an expert.
