# DISCUSSION GROUPS

The T. C. A. is taking a most important step by establishing discussion groups on a large scale. These groups, which will meet once a week, will bring the students together and acquainting them with one another's ideas, and judging the merits of a question from another standpoint than their own. Furthermore, the discussions will give a man an opportunity to judge the merits of a question from another standpoint than his own. The discussion groups will do away with this undesirable condition, not only by bringing men of different interests together, but also by discussing a question which will be broadened and will give each man an opportunity to judge the merits of a question from another standpoint than his own. Furthermore, the discussions will give a man an opportunity to test his own opinions, and find out what he really believes about a subject. A man's ideas on a subject are rather hazy; if one is exposed, many of his ideas are confused and his ideas are definite. An expression of opinion, either oral or written, will go a long distance toward eliminating this indifference, and make a man his own judge. A man's ideas on a subject are rather hazy; he knows in a general way what his standard of judgement is, but when he is asked to define his views he finds that his ideas are very indefinite. An expression of opinion, either oral or written, will go a long distance toward eliminating this indifference, and make a man his own judge.

The discussion groups will be held in different places and at different times for each group which he can conveniently attend regularly. If any student fails to sign for one of these groups, it will be his own fault.

A MAN AT THE TECHNOLOGY BUREAU

Rev. George Crocker Gilbs, O.f., who has arrived in France to take charge of the Technology Bureau of the University Union, is a man exceptionally fitted to undertake the tremendous task left open by the appointment of Van Renselaer Lansing '88 to Assistant Director of the American University Union. His experience in church work, as well as his knowledge of engineering will enable him to meet the class of men which the Technology Bureau serves, while his charm and capacity fit him for the future activity of the Bureau.

THE TECH has made arrangements with Mr. Gilbs whereby news will be promptly sent for publication, and this news will be of great interest to our readers, particularly those who have friends abroad.

Some of the people who take the entire hour inquiring into their own problem difficulties should remember that all hogs are not equal in this department. This training in focusing his views on a subject is rather hazy; he knows in a The Question Box has been in operation for some time, and it has been noticed that the majority of questions have arisen, and no such doubts are found among all the students. The students and the T. C. A., to whom the students are most likely to appeal in these matters, are strong-minded men. It is strongly desired that all students should come to the questioner will be withheld from publication, but each letter must be signed.
