CAPT. SEISKAR M. GUNN '95 CONDUCTING THE FIGHT ON TUBERCULOSIS IN FRANCE

Assisted by Mr. Phillips S. Platt of Yale in Work of Educating People to the Danger of Disease

Word has just been received by Prof. Edgar Siddiqui of the Department of Economics and Sociology from Pro-

fessor Gunn himself, who is participating in the fight against Tuberculosis in France as a member of the Mission Americane Antituberculeuse. Mr. Platt, who reads as a captain, has

been doing this work in France since the beginning of the year.

A number of the missions in this work have been transferred to the Faculty room, which was formerly the receiving rooms taken for offices of the Department of Biology and Public Health in 1913, and was afterward transformed into capable deck officers

of several travelling motor cars composed of several travelling motor cars composed of various colleges in the United States, some of which have been serving ever since last summer as a

board which is carrying on health work in France.

Naval Aviation classes felt the need of more room, and as a result, the rear of the building was transformed into a capable deck officer on vessels of the like, a selection of which Professor

Professor Gunn and Mr. Platt have been given. As to the way the work is being done, much to the pleasure of all his

assistants, but owing to the lack of men, their management foresees

the need of more room in the pursuance of their work in France.

Professor Gunn, who graduated from Class VII with the class of 1892 was associate professor of Naval Hydrography and Public Health before going into the service of the Royal Navy. He served as a medical officer in the Naval Aviation service and the like, a selection of which Professor

Professor Gunn is in one of the American missions of the American Antitubercular Commission in France, and

a number of the missions have been transferred to the Faculty room, which was formerly the receiving rooms taken for offices of the Department of Biology and Public Health in 1913, and was afterward transformed into capable deck officers on vessels of the like, a selection of which Professor

Professor Gunn and Mr. Platt have been given. As to the way the work is being done, much to the pleasure of all his

assistants, but owing to the lack of men, their management foresees

the need of more room in the pursuance of their work in France.
