Some Glimpses of This Year's Technique
Carnage Sketched By Staff Cartoonist

By E. Reid '18

To write a review of a Technique is a delicate task at best for any student writer, but it is made the more difficult by the fact that this, like the writer, was intimately acquainted with last year's book. I trust the praise of the work of this year's band it may be taken as an almost implicit augury that the present volume will be as good as the previous one. When you put it this way it is easy to see that our expectations are high.

The book is a compilation of material, which, so our experienced student authors tell us, is of tremendous importance. This book, though it contains many excellent features, is not in the main a book which will be of much use to those who are not interested in athletics. It is the opinion of the editor that the book is a bit too technical, and it would be better if more attention were given to important non-athletic subjects. The book would be more successful if it were divided into sections, each dealing with a different field of study.

The advertising in the book is somewhat excessive. It is the editor's opinion that this would have been more successful if the advertising were more successful, but it would also have been more successful if the advertising were more successful. The book would be more successful if the advertising were more successful, but it would also have been more successful if the advertising were more successful.
