Effect of the War on Student Enrollment

A recent bulletin issued by the Department of the Interior gives the following informative information of the effect which war has had on the enrollment of students in American universities. For some colleges of liberal arts the loss in student enrollment is 49 per cent., or 11,756 students. An interesting fact, however, is that the enrollment of women students has increased 13.2 per cent. It is apparent that women have realized their opportunity in the professions and are taking advantage of it. The Department of the Interior, in its statement that technical and professional schools have lost heavily because of the greater necessity of the student and also on account of the great demand for services such as theirs. A gain has been made in the registration of students at medical schools, due to the war of the War Department allowing medical students to finish their courses. Unfortunately, the corresponding order applying to engineering students was issued too late to show enrollment in the fall of 1917, and a serious loss amounting to more than 8 per cent. is noted.

Our country has also suffered losses in the registration of students. The registration in November, 1916, was 192,524, or 5 per cent. below the total for the same month for the year 1917. However, the enrollment of voest students has increased, in some cases from 7 to 26.

The registration for next fall is as yet and will be for some time, quite indefinite, because of the fact that the examination for the entrance to the Institutions of Technology is being conducted by the College Board and these returns will not be in before the summer is well gone. The likelihood is that there will be a large entering class just as there was last year, when the subject freshmen class ever entered. We shall gradually recover from the effect of the late order issued by the War Department and then our enrollment will become steadier as the war progresses.

"An Honest-to-God Guy"

You said it, he's a minister, but that does not interest us half as much as the fact that he is in charge of the Technology. Mr. Gibbs is the man who fleas sent over by the Alumni some time ago, with the idea that he is the one who may get the Technology men interested in the war. He stands like a good soldier, and has a great night's talk to his credit.

"The Army Artillery Corps is furnishing the Army with a difficulty."

The Army Artillery Corps is furnishing the Army with a difficulty. Mr. Gibbs is a minister, but that does not interest us half as much as the fact that he is in charge of the Technology. He has got a lot of work to do, but he is doing it well.
