Establish New Officers Training Station

A new Army Officers' Training Station will be established at Camp Jackson, N. C., in the near future. It will be for the purpose of preparing men for service as army officers. The station will be under the supervision of the War Department. It will be open to all applicants who are eligible for appointment as army officers. The station will be equipped with all necessary facilities for training officers. The officers will be selected from among the best qualified men available. The station will be open for five years.

PSYCHOLOGICAL TESTS GIVEN IN THE ARMY

Speaking of the use of psychological tests in the Army before a meeting of the College of Physicians at Philadelphia last spring, Major Robert 3. York, U. S. A., said that the psychological tests are in the use of the medical and army officers. He said that they are of great value in determining the fitness of a man for army service and in the selection of men for special duties. The tests are administered by trained officers.

EXPLOSIVES TO DYESTUFFS

The evolution from explosive to dyestuff is the logical development of the dyestuffs industry from both a chemical and engineering standpoint.

First, the explosive manufacturer starts with the necessary raw materials. In his manufacturing plants he produces the bases which are required. The explosive output of his plant is at his disposal. In his chemical factory he manufactures many of his principal intermediates.

He has at his command unequalled plant and laboratory facilities for the production of the intermediate by-products of the combination of the various chemicals in the manufacture of explosives and high explosives and in the manufacture of dye intermediates and dyestuffs.

Bo the chemical and engineering organization has had long training in the closely related explosives industry and is able through the experience gained to overcome difficulties which would be impossible to others less fortunately situated.

At the world's largest smelter of explosives the Du Pont Company enjoys these advantages to an unusual degree. It has already made possible the laying of a broad and secure foundation and the development of dyestuffs of the greatest commercial and industrial importance.

It is the strongest guarantee of the permanency of our dye industry from foreign domination.
