FRESHMAN DORMITORIES

The near the future the Institute is planning to build some new dormitories, and it would be well for us to discuss the subject of dormitories, for about which we have been interested to know the plan, and that we find that it has met with success. Although conditions are somewhat different on the campus here, we do tend to find some of the dormitories for Tech.

The dormitories are not quite to each other and each dormitory forms three sides of a court. The dormitories hold from 250 to 400 men each, and are divided into several sections. Each dormitory has a dinner room and a “common room” and living rooms of various sizes in each building for recreation and social purposes. The men of any particular class are not kept to the same dormitory, but they are close in sections. The men of the different classes are mixed up in the first years of college and the men of the same class are not kept in the same dormitory. The dormitories are divided into several sections. Each section has a separate building. Each dormitory is a complete unit and is self-contained.
