It is our problem not to build a spirit of the school, and help determine the treatment that they will receive to future newcomers.

Let us all work together to make the spirit at Technology as friendly as possible. We hope that every man will expect to receive a greeting from classmates, and will give a nod or hello to fellow 'Tech Men.'

This year marks the end of the combination of Technology and Harvard in Engineering. With the cost of the term of the Institute having been introduced before they recognize a classification. We think not. The attitude that the present classes take is sure to be handed down to incoming ones. During the war, freshman classes had not received the traditional welcome, help, and advice from the old men.

Although communications may be published unsigned for opinions expressed in the editorial, opinions on the contents are needed to reconstruct.

Both training but also as future citizens with his wife at the Copley-

Professor Johnson's idea of the amateur. As critics in the amateur.

A FRIENDLY SPIRIT

Few men at the Institute, especially men from other schools, miss the friendly spirit of cordiality that is particularly noticeable in the smaller American colleges. They miss the "hello" or nod from fellow students that is fast fading into dust here: even the Technology Buttom is disappearing. The larger institutions, and with the city colleges, have often been contrasted with the smaller schools in this respect.

The treatment that the new men receive this fall from the hands of the present classes will stamp the first impression of the spirit of the school, and help determine the treatment that they will give to future newcomers.

We hope that every man will expect to receive a greeting from classmates, and will give a nod or hello to fellow 'Tech Men.'
