COMMUNICATIONS

To the Editor of THE TECH:

I am writing this statement in regard to the sale of Field Night Tickets. It is the purpose of this article to enlighten anyone who still feels that an illegal sale of the said tickets was carried out.

The coupon that so many tickets were purchased by was delivered to the office as follows. First, at the weekly meeting of the engineering society, a block of forty-four seats in the front section was reserved for Field Night official use and others. This took out eight rows from the front section, the seats reserved for Field Day official use and official use on the 3rd. It seemed fair that men who have given much of their time to this project are included in the Institute, outside of their regular work. Therefore, I hope that they can get seats at the Institute which is the most important part of these plans.

Third, the offices of the remaining chairs behind these seats, which meant that sixteen tickets were gone right there.

Lastly, the committee in charge of Tech Night, Mr. Dyer, and myself, did not feel that it was tenable to refuse the demand for seats, but we could not further accommodate the large number registered for Tech Night. Hence, the plan was decided upon and executed. The result of this action was that the large number of students who registered for Tech Night could be accommodated, as the demand for seats was not as great as it was before. However, it is important to stress that the demand for seats was much greater than was expected.

I provide recreation for the majority, we seem to have forgotten some; we are trying not to be satisfied. Two hundred and forty-one colleges are included in this list. I will close by saying that we are trying to make use of the opportunity to accommodate that many, but, instead, to continue the paper which Clarke '21, Managing Editor; M. L. A. Droller, Editor-in-Chief; C. A. Strickland, Advertising Manager.

STUDENTS FROM OTHER COLLEGES

THROUGH the courtesy of Miss Herrins of the Dean's office, and at the instance of THE TECH, a list has been prepared of all new students from other colleges and universities. The list has been arranged so that a student may look up his former college in an alphabetical list and find there the names of all other students transferring this year. It has been posted on the main bulletin board opposite the bursar's office where it may be readily consulted. Two hundred and forty-one colleges are included in this list, a fact which gives an indication of the broad territory on which the enrolling of the Institute covers.

ORGANIC LABORATORY TOO SMALL

The Organic Chemistry laboratory in room 206 is said to be too small to accommodate the large number of students who registered for the lab in the spring semester. However, the lab was quickly filled out, however, and the students are due in class the following week.
