At Last

The Membership Diaries have reached us. If you didn’t get your book when you ordered it, it is waiting for you.

Dividends

Some members have not been in to get dividend checks for past year. They are waiting—so are the checks!

TECHNOLOGY BRANCH

A Gateway—Electrical

ONLY a forty-foot gateway bounded by two brick pilasters and ornamental lamps, but unlike any other gateway in the entire world.

For lack of it is the General Electric Company’s main office building, accommodating 1800 employees. And just next door is its laboratory with the best equipment for testing, standardizing and research at the command of capable engineers. Then down the street—a mile long—are other buildings where everything electrical, from the smallest lamp socket to the huge turbines for electrically propelled battleships, is made by the 20,000 electrical workers who daily stream through.

What a story this gate would tell, if it could, of the leaders of the electrical industry and business, of achievements from other institutions and from foreign lands.

The story would be the history of electric lighting, electric transportation, electric industries and electricity in the home.

This gateway, as well as the research, engineering and manufacturing companies behind it, is open to all who are working for the betterment of the electrical industry.

Illustrated bulletin, Y-963, describing the company’s several plans, will be mailed upon request. Address: General Electric Company, Dunkirk, New York.
