Americans were all carried at exactly the same speed, showing that they were in a mass movement; and continued with this the action of the French troops when they, accosted by their old custom, pulled off their head gear and chose at every halt, even in this moment of war, to look up, the French look them square in the eye."

Lt. Carb condemned the German and British "mechanical mind" saying that when men had minds at all the same level no advancement could be made because greater strides were made in those minds which were in excess of the rest. Also it is shown by statistics that the French youth is far more advanced than the American in the same sense. "This advance in the arts and education," he said, "is far more advanced than the American at this time."

Many K. of C. Students Choose Engineering

Majority of Applicants Desire Technical Training

The overburdening tendency toward engineering education is forcibly shown in the applications for scholarship aid by the class of 1920 from the Knights of Columbus. Fifty per cent of the veterans who applied for these scholarships were courted for some form of engineering education. More than five hundred men of all denominations are receiving college education at present entered in various courses. The Knights of Columbus are paying all tuition, books, room, and board of the students who apply for aid. Every veteran who is a member of the Knights of Columbus and who is a graduate of the University of Notre Dame or has successfully completed the junior course of study at the University of Notre Dame, is being requested by the Undergraduate Committee of the Knights of Columbus to apply for the aid offered by the Knights of Columbus to their members. The committee will consider the applications of the time, and will make the selection of members of the time, and will make the selection of members of the time, and will make the selection of members of the time, and will make the selection of members of the time.
