PROF. BUSH WILL TALK TO RLE AS WORKER AT SMOKER

Professor V. Bush of the Electrical Engineering Department, M. C. Co., U. S., will be the principal speakers at the M. C. Co. Radio Society smoker which will be held in the Walker Memorial on January 26 in the Walker Memorial. Professor Bush will talk on Radio Engineering.

The wireless station is not being used at present because of the severance of the staff through the Radio Bureau in Washington, and the station in the meantime is being used as a temporary office, the Permanent Radio Station in the State House. The Institute is purchasing the set from the government and the Radio Society will be responsible to the Institute for its care and use. It is not used as a means of communication for the present, but will be put in the experimental set in the near future.

Professor A. E. Kennelly has obtained an army field transmission set which will be given at the Institute later next month. It will be used for military training. The arrangement for the transmission of this type is limited to members of the Radio Society.

President in the same year. The Company is engaged in the manufacture of insulated wires and cables, and is also a member of the Corporation Committee on the Endowment Fund. He was one of the youngest men to graduate from Technology, being born in 1896, and is still president of the Institute.

He entered a banking house immediately upon graduation and has since served as president of several banks. With Mr. Glessner, then financial editor of the Boston Transcript, he founded Stone and Co., bankers and trust company, and has given money to and worked among others of its clients such as R. Governor Fleet of Massachusetts and D. J. S. Archibald, the great copper

Electricity—The Master Force in Manufacturing

The marvels of electricity have revolutionized our manufacturing industries. With belts and pulleys replaced by electric motors operating automatic—almost human—machines, many a dull and tedious process has been eliminated. The factory worker's task of yesterday is made pleasant by his command of this magic power.

The Crane Company's plant at Chicago—electrically through and through—is a model of industrial efficiency. Its 1,000 horse-power of driving energy is brought by three small wires from a distant power plant. Then electricity drives the machinery which handles the coal for heating, cuts the steel, fits the wood and sorts the material—in fact does everything from scrubbing the floor to winding the clock.

Such an institution is marvelous—superman—made this by the man-multiplying force of electricity. The General Electric Company has been instrumental in effecting this revolution. First, by developing successful electric generating and transmission apparatus to furnish economically this magic power. Secondly, through many years of active co-operation with hundreds of manufacturers, it has mastered the art of applying ever-increasing amounts of power to a multitude of uses in numerous offices and other distributing channels, its products are made accessible to all.

The Arrival of The Fittest

One of the novel features of the year is the introduction of a new type of inspiration. The sun is its chief source of energy. And in our own home philosophy, we can find no substitute for honest hard work. It is the use of vital, original, irreplaceable things, the cultivation of individuality and self-expression. This is a natural result of the simple, direct, graphic method of doing things—planting, preparing, having, using.

Hotel Brunswick

There is nothing in Boston quite so good as the Egyptian Room. You will find no greater opportunity for Musical and Social Life in the Egyptian Room.

Special "Personality" Course

How to become popular and be a good sport, in your class and make yourself liked by people of all classes. This will be taught in the Hotel, on Monday, Tuesday, Thursday, Friday evenings from 8:30 to 10:30.

"Special Dancing Feature"

A good reason for coming to the Hotel. Special dances will be held in the Egyptian Room on Friday evenings.
