WALKER LONG PLANNED

The movement for the erection of a memorial to the memory of President Walker was first started in 1890. At that time, the idea was generally held that no monument should be raised for the late President, a position taken by those who were unsatisfied with the services of General Grant, and who considered it an injustice to put the need of a suitable place for the late President's remains, and a committee was organized to obtain funds for the purpose. A subscription list was opened for the purpose of raising the necessary funds, and the committee was finally able to raise $10,000, which was sufficient to build a memorial building to the late President.

At first it was the intention of the committee to raise a building that would serve as a memorial to President Walker. However, it was felt that a memorial building should be erected that would house not only the government but also the organization of the United States. Therefore, it was decided that the building should be extended to include the headquarters of the American Institute of Electrical Engineers. The building was finally completed in September, 1892.

The institute was incorporated, and the first president was elected. The building was then opened to the public, and the institute was able to conduct its affairs in the new building.

In 1912, the institute decided to extend the building to include a laboratory for the purpose of research. The laboratory was completed in 1914, and the institute has been able to conduct research in the field of electrical engineering.

The institute has continued to grow and expand, and the building has been expanded several times to accommodate the growing membership.

The institute has had a long and distinguished history, and it has been able to continue its activities in the building ever since its completion.
