THE ORDNANCE SCHOOL COMES TO TECH

During the war the efforts of M. L. T., to train officers for the flying forces of the Navy, and to assist the government generally, was one of the important jobs of the department. At the present time this is the head of the efficiency and standards of the Institute. Finding Technology eager to cooperate in a most patriotic spirit and realize the importance of training the ordnance forces at the School, the government has seen fit to move the Ordnance School to Boston.

This is a matter of real importance. The selection of a Tech is a great accolade as it evinces the high opinion entertained of the scientific and faculty of the Institute. It is also a matter of satisfaction to realize that the ordnance forces of the government have found at great educational centers for preparedness for national emergencies and to the preparation of the world for a warring department, in a bond of patriotic interest and co-operation. It gives to the Institute the power of serving the country by producing ordnance officers at a much lower cost than the maintenance of a separate school for this purpose. Finding the Institute so lax in getting the tennis courts into play, the officers from Aberdeen to Boston.

The Executive Committee receives the congratulations of all for the efficient manner in which preparations were made and the meetings conducted. The plans were so laid out that the discussion on each subject was just sufficient, and there was a minimum of time wasted in useless talk. The plans were so laid out that the minimum of time were wasted in useless talk. The plans were so laid out that the

INTERCOLLEGIATE CONFERENCE

The experiment of an Intercollegiate Conference on student government has been tried and has turned out successfully. Is seems on the whole an outstanding success. It certain it is gratifying for us to feel that the first conference of its kind, held under such favorable conditions, was so successful.

The Executive Committee desires the congratulations of all for the efficient manner in which preparations were made and the meetings conducted. The plans were so laid out that the discussion on each subject was just sufficient, and there was a minimum of time wasted in useless talk.

There is no doubt that all the delegates were very well satisfied with the arrangements made for the meetings, each delegate was forth made. None of the subjects were given, but throughly treated in the discussion. It is usually very difficult for a conference of any kind to actually accomplish anything, and it speaks well for the efficiency and standards of the Institute as a whole that the Conference was so satisfying.

Credit must also be given to the General Committee for their work in arranging for the entertainment of the representatives from other institutions. By means of the dance and banquet, and in many other ways, our guests were shown the social side of the Institute, and they enjoyed themselves very much. We hope that they will carry back to their universities and colleges, a new and truly representative impression of Technology, and as a result, may we assume a more prominent position among institutions of learning.

THE INSTITUTE TENNIS COURTS

A earnest attempt is being made to develop a first class tennis team at the Institute this year. The tennis management in charge of doing everything in their power to locate the team on a successful basis. It is difficult to understand why the Institute is so lax in getting the tennis courts into play, and it is to be hoped that the Institute will soon be attended to by the proper authorities.

The Managing Board of Volume XLI takes pleasure in announcing the election of Stevens Bromley '23 to the position of News Editor of C. H. Southard, III, '25, to the position of News Editor.

COMMUNICATIONS

To the Editor of THE TECH:

In your issue of Wednesday, April 21, you carried a front page story relating how the reports on the Intercollegiate Conference were conveyed and how the bulk of the material was handled. What form of the reports so that they could be collected and printed, and as with a minimum amount of labor. We have had the pleasure of covering the conference and met the officials of the Intercollegiate Conference who explained to us that they were given their material for their own use, that it may be made available for the benefit of the Institute. The group of journalists that the cardinal principle of all journalism is Truth. The Cardinal Principle of all journalism is Truth.

JAMES R. WARD

New York, April 22, 1921.

To the Editor of THE TECH:

I am informed that the General Committee in charge of the Intercollegiate Conference met last Tuesday and that much progress was made in that important event. It is a matter of great satisfaction to see how the Conference was beneficial to all concerned, and that the results have been a meeting at the present writing.
