DALLIES IN POLITICALS

The field of city politics is not without its devotees of Technology men. Recently, the board of education of the city of Rochester, New York, has appointed Alfred A. Johns, ’19, as a member of the board of education, of which he is president during his senior year.

Johns graduated from the University of Rochester in 1915 and four years later he obtained his degree in civil engineering. While in technology he was connected with the Cast-iron and Foundry Department of the University, of which he was president during his senior year.

This new appointment to the board of education is a very interesting one. The appointment of a man of Johns’ ability to this position is quite a feat, for none of the members of the board of education are known to have any political ambitions.

In the meantime, the students of Technology have been elected to the board of education. The alumni of Technology, who have been very active in the election of their own candidates, have been elected to the board of education.

The students of Technology, who have been very active in the election of their own candidates, have been elected to the board of education. The alumni of Technology, who have been very active in the election of their own candidates, have been elected to the board of education.

ARE THEY WORTHWHILE?

As the semester begins to draw to a close, we find that the students of Technology are more interested in the affairs of the institute than they were at the beginning of the semester.

We see two reasons for giving an interest to the affairs of the institute. The first reason is that if the students are not interested in the affairs of the institute, they will not be able to elect their own candidates to the board of education.

The second reason is that if the students of Technology are not interested in the affairs of the institute, they will not be able to elect their own candidates to the board of education.

T. N. OFFERS STUDENTS ADVICE ON DUTY (Continued from Page 1)

The T. N. has already made a number of suggestions to the students of Technology, and it is to be hoped that the students will follow these suggestions and make the institute a better place for all.

WANTED: DEVELOPMENTS ON THE NEW DORMITORIES

Much has passed and many things have been done since we have last heard of the developments for the new dormitories. The institute authorities, touching upon matters of greater or less importance, have been engaged in the work of building and construction, and it seems that the only thing that might be done is this very important thing is to get the development of the new dormitories. The students of Technology have been working hard to get the development of the new dormitories.

The first point that is not so much that the dormitories are not in process of construction at the present time, but rather that all consideration of the dormitories is being deferred. All students realize the difficulty presented by the new dormitories, and it is hoped that the students will do their part in the construction of the new dormitories. If the students are not interested in the affairs of the institute, they will not be able to elect their own candidates to the board of education.

Our alumnae wish to thank the students of Technology for the excellent mid-season values of the United Ticket Office.

NOTICES FOR UNDERGRADUATES

Recent Developments in Science. First lecture in 3050, January 6, at 4:00 o'clock. Mr. W. H. Johnson, of the Physics Department, will lecture on "Some Recent Developments in the Understanding of Spectra." A Council on Athletics will hold its meeting at Engineers’ Club, 2 Commonwealth Avenue, January 3, at 7:30 o’clock.

G. C. Engler, Engineer Unit will hold music meeting and dance in near future.
