SOCIETY BEARS GENERAL RADIO COMPANY EXPERT 

Second Annual A. L. & C. Banquet Will Be Held 

in the Restaurant of the Hotel Belvedere, 

ANTENNA SUBJECT OF TALK

The Radio Society will hold its annual banquet this evening at 7 o'clock in the grill room of Walker Club. Mr. Charles E. Whitehead of the General Radio Company will address the meeting on "Antenna Subject of Talk." He will deal with the construction and applications of the antenna. The meeting is free to all interested in wireless engineering and will be followed by the singing of the national anthem.

LAW AND ORDER IN BOSTON ENSURE SAFETY 

The improvements are marked by the addition of navigation facilities, as dredging the river and deepening of the harbor, the installation of telephone communication, and the establishment of the life-saving service at the mouth of the river. The river has been made navigable for vessels of all sizes, and the harbor has been deepened to accommodate large ships. The life-saving service has been established to provide assistance to those in danger at sea.

The Society's editor of Technology 1925 has just pointed out that the society is at present engaged in the study of the effects of silence on the brain. The work is being done in cooperation with the Massachusetts Institute of Technology.

It is expected that this address will reiterate the principles and objectives of the society, and will deal with the question of the relationship of science to society.
