OUR PLACE IN THE SUN

With a year behind marked by disheartening defeats for our athletic teams, the old question of the Institute's acceptance in the athletic world comes foremost in our mind.

The blame for most of our troubles, outside of the human material to work with, has been found in the manager's ignorance. A lack of adequate training facilities including in the manager and assistant managers means to force other rules has kept many far from their best condition. Small funds and inadequate personnel have prevented the development of promising men. On the other hand, it has been said that a lack of opportunity to develop them has kept them back.

The end of the year brought out events that promote better for the future. Oureldon has been greatly increased, and money allowances have been raised. This, however, may or may not be for athletics here. If Technology has been willing to assist, its increased activity shows that it is no longer only marking time. It is entering actively to that end of the question, although do far that they have yet no real organization of a kind that makes it possible to have the peak of that organization. The Technology has been working toward this goal, and has shown to be a possibility.

Freshmen, whether it be through disinterestedness or lack of interest, must often be considered a factor in the current tone of The Nation. Our problem is how to secure their participation. What we feel that is necessary is to have the bill of fare, not merely eat the food, but also participate in the selection of the menu. This will be done only when we have a clear idea of what it is we want them to do.

Mr. C. G. Whipple, Secretary of the School of Public Health at the Institute of Technology, has given a lecture on College Men, which is a publication of H. L. Power of the University of Illinois. It is a book on what to say about the many problems that face the average college student. The book is a clear and concise guide for all those who are interested in the subject. It is a book that everyone should read carefully and follow. It is of the utmost importance that we all learn how to deal with the problems that face us daily.

FOR THE REST OF THE WEEK
