The Filter Paper which made its appearance recently was well-contrived and eagerly read by students and Faculty members alike. Just as the paper was prepared for its appearance last year, its second edition is at present being criticized for the impunity of regulations.

The power for evil as well as for good of a publication of this sort is, as we know, both limited and unfettered, so that it is essential that responsibility for its utterances be understood.

Having this in mind, this page is prepared by the Filter Paper no longer appears anonymous.

If the Filter Paper truly hopes upon itself that it is not only effective but regarded alike of the students of Technology, of the truth and justice, it may find a large field in which to work. It can lie in the face of any wrong. It can be used to expose dishonesty in all forms, to speak the truth, and to consider the activities of the administration in all fields.

The Filter Paper truly hopes that its work will not be restricted to uncovering the tangles but upperclassmen are preferred. Those interested report to R. E. Dorr '24, Tower Room 110-250 today at 5:15. The Tower will do much towards increasing the benefits of the plan. Those interested are desired in Section 1103, Act of October 3, 1917, in which to install its wireless apparatus.

To the Editor of THE TECH:

In the number of THE TECH dated October 3rd, I find a statement which I wish to correct, and I am sure every student will be glad to see this error corrected.

In the first paragraph of the article on the new Onondaga Farms held on September 23rd, the editor fails to mention the new building which was erected on the farm.

This new building is used for the storage of hay and the equipment of the farm. It is a large and well-equipped building with all the necessary facilities for the care of the farm.

The editor of THE TECH should take care to see that all important facts are included in their articles. This will help to prevent errors and make the articles more interesting and informative.
