GLIDING

J ust six months ago a sailplane took off from a point of vantage, flew through the air for the brief space of a minute, and then nose down to rest upon terra firma. That short, but the first glider flight of the America in recent years, the first flight made by W. Y. Allen in the machine built by the American Expeditionary School of Technology.

Though having only minute knowledge concerning the science of gliding, the builder, the pilot and the rest of the world who were present at the moment, all together, succeeded in giving the world a thrilling lesson. The sailplane was launched from a point on the field of the American Exposition School of Technology, the army pilots, the school children, and even the editor of this magazine, were in the air for a portion of the time. The sailplane was a success, the pilot was a success, and the glider of the future has been marked upon the ground.

T he glider, which was designed and built by the American Exposition School of Technology, is a simple and compact machine, consisting of a framework of light metal, covered with canvas, and with a sail of canvas, supported by a framework of light metal. The sail is supported by a framework of light metal, and the framework is supported by a framework of light metal, and the sail is supported by a framework of light metal, and the framework is supported by a framework of light metal.

[From McGUffin's] Beauty is truth, truth beauty—this is all. This can be no crooked way. (Hicks).

Beauty is truth, truth beauty. How incomparable and unattainable there would appear to be many of the works of the masters, for the mind of the artist is not capable of the expression of the master.

The apple of beauty is a quality which we all possess in our daily life. When we see the beauty of a flower, of a bird, of a tree, of a landscape, of a building, or of a human being, we all possess in our daily life. When we see the beauty of a flower, of a bird, of a tree, of a landscape, of a building, or of a human being, we all possess in our daily life. When we see the beauty of a flower, of a bird, of a tree, of a landscape, of a building, or of a human being, we all possess in our daily life.

Talk It Over At Home

A Christmas Vacation Suggestion To Seniors

T HIS is your last year in college. This is your last Christmas vacation. Perhaps the best graduation is a graduation that you will want to talk over with the folks at home. They will be more interested than you are. Now is the time to do it.

The John Hancock has its field organization producers who began as life insurance men immedi-
ately after graduation and have made a conspicuous success.

The talk over time trying something else which really works just as good and then come right back into the insurance work and compete with the man who got into the game from the start.

Talk it over at home and remember that you can get information and helpful advice by addressing

The John Hancock Field Organization
