NECESSITY OF FIRE PREVENTION SHOWN
W. L. Bazelye, State Forester, Telephonic Notes, April 1895, 159-161

MUST BE DONE BY TAXATION

The importance of state action in fire prevention is shown by the fact that the state of New York has, in recent years, extended its system of taxation and fire prevention to all counties and cities. This is an important step forward, as it recognizes the vital necessity of effective fire prevention. New York is in a better position than most other states to carry this work through, because of the large number of its population and the concentration of its wealth in the cities.

Limitation of Towns

The town is permanent, yet it is determined by the individual. When a town presents expenditures for the sale of future timber, the tax for each tax year will be fifty or sixty years hence. In the 1940s, the state was in a position to look ahead to the future. If the state does not take advantage of the opportunities that exist today, it will have to wait until the next century to see the results.

Efficiency Necessary

"The practice of forestry," said Commissary Babar, "is only a matter of the present intent. When a state, or a nation, is ready to make provision for the future, it will be ready to carry on its work efficiently." Babar believed that good leadership and the support of the public are necessary for efficient forestry. The state must act now, or it will be too late.

Question of State vs. Owner

"In the United States there are five classes of fire risk," Babar explained. "The state, the town, the city, the county, and the owner. The state must take the lead in providing fire protection for the whole community."

Sustained Forest Resources

"The forests of the United States are the greatest asset of our nation," Babar stated. "They provide a source of income, a means of recreation, and a way of life for millions of people. We must use them wisely, to ensure that future generations will have the same benefits.

Conclusion

"The practice of forestry is a matter of conscience," Babar concluded. "We must do our part to ensure the well-being of our communities and the future of our country."

INTERCOLLEGIATE NEWS

New Publication of Vermont Student of the College of Agriculture at St. Paul's University, a new publication, has been started. It is a quarterly review of agricultural science and is known as the "Vermont Journal of Agriculture." The journal is published by the college and is available to students and the public.

Cause for Excitement

A potentially valuable discovery was made on fire and water, with great interest from the agricultural community. The discovery is expected to have a significant impact on the agricultural sector and is expected to be published in the "Vermont Journal of Agriculture." The journal will be available for public access.

We Courteously Solicit the Patronage of All Tech Students

A. W. Bridges, Manager

Walker Memorial Dining Rooms

Do You Know That

-By using our 50¢ coupon book you save 10% on all meals.
-These books are on sale in the Cafeteria from 11-12:30 o'clock and 4:30-7:00 o'clock.
-Dinner is served from 5-7:00 o'clock.
-Also, the Grill Room which is open to all TECH men serves breakfast from 7-10 o'clock.
-Dinner from 5-7:00 o'clock.
-Cafeteria SPECIALS are obtainable in the Grill Room.

Coltana to Pay Penn

Coltana, the new corporation formed to operate the "Coltana" mines in the State of New Mexico, is expected to announce a new mining project. The announcement will be made at a press conference in Phoenix, Arizona, and will be carried by the local newspapers.

Pilots in the Stelios, the new wing, will be flown by the Coltana pilots, who are expected to be the first to take off from the new runway.

Surveying

A new surveying team has been formed to survey the new routes in the West. The team will be led by the experienced surveyor, Mr. Smith, who has been working on the problem for several months.

New Form of Fire Prevention

A new form of fire prevention has been developed by the research team. The team has been working on the problem for several months, and has developed a new method of preventing fires.
