always mindful of the needs of the industries, and the way in which the students could best be used in aid of them, the eyes of the institute will be turned more, now than ever before, in this direction.

Association with Professor Straton in the future is eagerly anticipated. The industrial interests of the country are of such importance that the success of the institute and the science of which it is a part is the responsibility of every citizen of this country. It is declared that the institute is an experiment of national value, and that, before the nation will be in a position to understand its needs, it is necessary to be prepared to meet them. The institute is the only one of its kind in the country, and the first step in the right direction.

THE TECH

Broad Field in Mechanical Engineering

By Professor E. F. Miller

Professor E. F. Miller:

The most important development of the past year in the Institute of Technology, the term Civil Engineer, is the reorganization of the Department of Civil Engineering. The department, which has long been in a state of transition, has now been reorganized and is now functioning as a separate entity.

The new department has been formed in accordance with the wishes of the students and the faculty, and is now functioning under the direction of Professor E. F. Miller.

The new department is divided into two divisions: the civil engineering division and the mechanical engineering division. The civil engineering division is devoted to the study of the engineering sciences and the mechanical engineering division is devoted to the study of the mechanical sciences.

The new department has been formed with the object of giving the students a better opportunity to study the sciences of engineering and the mechanical sciences. The students will now have the opportunity to study the sciences of engineering and the mechanical sciences in a special way, and to study them in a manner which will be of the greatest benefit to them.

The new department has been formed in accordance with the wishes of the students and the faculty, and is now functioning under the direction of Professor E. F. Miller.
