TFR 13: Naval Architecture and Engineering. It is designed to prepare students for professional service in the field of mechanical engineering in civil service, manufacturing, and consulting engineers. It is essentially a five-year course with a one-year internship.

The course involves lectures, seminars, and laboratory work. It is divided into two main parts: the first part is devoted to the fundamentals of naval architecture, while the second part is focused on the applications of these fundamentals to specific marine vessels.

The course is taught by experienced professors who have extensive knowledge and experience in the field. The students are required to complete a variety of assignments and projects, including design projects, problem-solving exercises, and case studies.

The course is open to students who meet the prerequisites, which include a strong foundation in mathematics, physics, and chemistry. It is recommended for students who are interested in pursuing a career in naval architecture and engineering.

If you are interested in enrolling in this course, please contact the Advising Office for more information and to ensure that you meet the prerequisites. The course is offered in the fall and spring semesters.
