The University of Engineering

Of all the things that go to make the successful engineer, none is more important, nor more in step with the spirit of the profession, than a studious attitude. One man says about another—"he is always willing to learn," "he doesn't think he knows it all"—and he intends to pay a high compliment when he says it.

The great engineers are always at school, always learning, always seeking for more knowledge. They begin with this desire for fuller understanding, and keep it up the rest of their lives.

Any engineering operation, over and above the primary purpose for which it is carried out, is an active and post-graduate class in engineering, also. So that Westinghouse, or any other great business, that wishes to be modern, will try to keep up with this spirit of learning.

The Corporation, Tex Tanx, knows that all students are trained to be capable of handling assignments, they know what the students are doing, and they know what their job is. They know that the engineers are working hard, and that their work is being done to the best of their ability.

The Courses in this University are not limited to prescribed subjects nor terms— the subjects are almost infinite, and the students are free to choose any subject they wish. The courses are designed to be flexible, so that each student can work at his own pace and in his own way.

The students are trained to be versatile, and to be able to work in any field of engineering. They are trained to be able to work with a team, and to work independently. They are trained to be able to work on any project, no matter how large or small.

The students are trained to be able to work on any project, no matter how large or small.
