SIXTY BIOLOGY GRADUATES DINE
Brantley Plan of Cooperation Is Thus Brought into Practice
About fifty graduates from the Department of Biology at the Institute re-ceived old friends and scattered steers, with all churlishness in on the Frances Blanton at the Institute Saturday night.

Dr. Strangis's idea
This is the second year of the development of the cooperation of several of the institutes which are working on the subject of biological science. Each department in the Institute has a similar group of students, and it is the desire of the students to form the cooperation of all of these groups, particularly in the field of public health.

Dr. Strangis's idea
This is the second year of the development of one of the cooperation of groups of students which are working in the field of biological science.
