EARTH'S AGE IS 12 MILLION OR 4 BILLION YEARS

WANTS TEACHER FOR EAST CAMBRIDGE JAIL

Prof. H. W. Shimer Says It All Depends on Which Way It Is Figured

DELIVERS FIRST ARTS SOCIETY TALK SUNDAY

That the earth may be seen from 12 million to four billion years old, depending on the way in which it is figured, was brought out by H. W. Shimer, Professor of Physics at Harvard University, in his talk at the first meeting of the Arts Society, in the Constitution Hall of the Boys' Department of the Technical High School, yesterday afternoon.

Professor Shimer outlined the theory of the ages of the earth, which is based on the length of the universe, as determined by the number of stars visible in a certain part of the heavens.

From actual experience the fundamental principles of the universe are made clear. By the fundamental principles of business are made clear. By
