RUNNING WILD

EVERY so often some one spends considerable effort telling the world how the younger generation is fast going to the bad, and from this we learn something. W. L. Sichman, a member of the University of Wisconsin, has just commented on this fact and so we have a somewhat optimistic attitude toward the younger generation.

"Youth is said to be running wild. Colleges are being criticized from all sides: the educators, the journalists, and the students themselves. It is a much too much that the older generation is basking in luxury much the same as the Athenians in ancient times. The generation has not been, and never will be, completed.

The value of all this talk about youth is that it will teach the new Americans to fit into the life which is developing itself. Just criticism can help to make this generation think something about its conduct."

PEACE AND THE COLLEGES

The remarks of the college referendums held this month on the campus of the University of Wisconsin, have clearly illustrated two points. First it is quite apparent from the results of the referendums that something is being done toward improving the social life of the University. In the second place, judging from the conception of opinion of those who did cast a vote, the plan met with a very general approval. Yale, Brown, Harvard, Tufts, Technology, and most of the other institutions at which referendums were held are in favor of the plan by considerable majorities.

Although the final results of the nation-wide referendum have not as yet been completely tabulated, the college referendums and their results in many localities was precisely the opposite of that among the colleges. The student body of each college, the views of the faculty, and the public in general are making us think of how the colleges are and what they should be.
