OSWYLL BOOKER ROBINSON

T HE TECH extends the deepest sympathy to the parents of Oswyyl Booker Robinon, who died Friday, after an operation necessary to correct an appendix lesion which he had at the beginning of this term. He was loved and admired by all who knew him. His brilliances, his artfulness, and intellectual development which should have brought him the highest respect during his short active life.

Coming out for THE TECH in the full of his freshman year, Ddlynn advised him as one of the most brilliant contributions known in several years. His ability and reliability brought him comment, and in numerous printed discussions, on which he held the beginning of the term.

Of all the students, no one is more insistent to all his friends and to THE TECH, but has cut short what promised to be a brillent career. His friendship and his spirit and activities proved to him a man of the highest capabilities.

OUR COMING FRESHMEN

NOW that this year is nearing its close, the time approaches for the present Sophomore Class to commence planning a reception for the Class of 1936 when they arrive in the fall. The garden of teaching and the fresnshen of Technology will fall upon the Class of 1926. We have few traditions outside of Field Day to hand down to them. We have, however, some songs and cheers that they should have. Field Day creates a certain amount of class spirit, as there is bound to be some enthusiasm and rivalry, but it soon dies down. It is impossible to force the freshman together by having them as the usual college method. Hazing is regarded as beneath the dignity of freshmen. An attempt was made this year in the Dormitories to get the new men out and to make their songs "Take Me Back To Tech" and "The Stein Song" under penalty of being doused with ice water if they did not know them. The results were very poor. The songs are unmelodious and the whole a flat degenerated into a session of snotty stories. It should not be impossible to have something more and worthwhile for solutions for this lack of spirit in evident in past years. Hazing, as you know, is the same as having some sensible ideas that will help the incoming freshmen to get acquainted with the Institute's customs, songs and cheers.

Student Conference at Silver Bay Lasts Eight Days—Meetings Held Every Morning

Last Year's Conference

Once again the opportunity of attending a Student Conference at Silver Bay is offered to Technology mark Century to the general purpose, the subjects taken up at these conferences in common with the usual local university are technical papers, reports of meetings, technical papers, and reports of meetings. The primary purpose of these presentations is to give the student a chance to be in the presence of great minds in the field of engineering and industrial relations. The student who has been brought up on a steady diet of dull and senseless papers on such topics as "The Effects of Phosphorus on the Growth of Corn," is not likely to be impressed by the able speakers admiring.

A special experience is the chance to hear a speaker who has been travelling extensively for ten years, and is at liberty to breathe new life into his examinations. The student who has been confined to the lecture or bookroom, can follow the lecture on the "Influence of Social Relations on the Future of the World," and is likely to be impressed with the speaker's view of the near future. The student who has been brought up on a steady diet of dull and senseless papers on such topics as "The Effects of Phosphorus on the Growth of Corn," is not likely to be impressed with the speaker's view of the near future.

Agendas for this year are full of new ideas and events. It is expected that the trip will be an illuminating experience and will be

Wrigleys is double the flavor for double the pleasure.
