Engineers Spend Busy Summer At Camp Devens Training for Reserve Officers

The Engineer Unit of the R. O. T. C. held their summer camp at Camp Devens for the second year. The camp was opened on July 27 and concluded on August 26. Camp Devens is a military camp of 3,500 acres located in the northern part of Massachusetts. The camp is equipped with all the latest military equipment and is used for training reserve officers in the engineering field.

During the summer, the engineers were engaged in various activities such as building bridges, laying out positions for the infantry, and practicing maneuvers. The camp was divided into various units, each under the command of a commissioned officer. The engineers were trained in various aspects of military engineering, including the design and construction of bridges, roads, and other military structures.

The camp also provided an opportunity for the engineers to practice their skills in real-world scenarios. They were involved in the construction of defensive positions, and were tasked with setting up and maintaining the camp's supply lines.

The camp was well-equipped with various military vehicles and equipment. The engineers were trained to operate these vehicles, and were also taught how to maintain and repair them.

In addition to the military training, the engineers were also involved in various recreational activities. They participated in sports such as football, basketball, and track, and were able to unwind after a long day of training.

The summer camp was a valuable experience for the engineers, as it provided them with a hands-on opportunity to apply the theories they had learned in the classroom. It was also an opportunity to bond with their fellow cadets and to develop their teamwork and leadership skills.

In short, the engineers spent a busy summer at Camp Devens, training for reserve officers, and preparing for their future careers in the engineering field.
