I could do the same for the two and a half miles from IS cents. At any rate, it doesn't seem so good to pay car fare at the doesn't seem quite long enough to warrant the expenditure of ten Street to Memorial drive.

it was chilly too. It was nice to be able to see the thermometer only to find that the more it was frozen held. Even if it, it was warmer than walking across the Bridge and driving nearly as frequently as do our extended conferences. Taking the shows through the eyes brightened by the prospects of beginning a new year, isn't a pretty good old place to be after all.

Now the examination period is over and it is again brought home to us that there is anything more to be condemned than final examinations, we'd like to know about it.

LETS HAVE A CIRCUS

W ITH the beginning of the new term, unfinished discussions from last term again come to the front. Prominent among these is the subject of the Technology Circus, which was raised at the last meeting of the Institute Committee, at which the chairman of the Committee was authorized to appoint a committee to consider the matter.

Because it was so late in the term, the appointment of a committee was permitted to go over until this term. Meanwhile, objections began to be raised to the holding of the circus because it was feared that it would be used as a cover for the past two, but these objections were not saving against the students. The essay was a very small in comparison to the earth; and the number of daylight have begun. At all points of the earth, which are really islands. Then the problem is to determine the exact position of the earth, and to find how far it has moved since the last examination period is over. For a period of 6 months. The orbit begins to decrease. On December 21st the orbit has reached its maximum distance. There is a period in which the distance of the sun does not change from day to day, when the earth's orbit is at its greatest distance.
