WHY NOT A SWIMMING POOL?

The results of the swimming team's meet with Yale Friday afternoon was a back with more force than ever the longest needed for a swimming pool at the Institute. At present the team has to practice in the Huntington Aquatic Club.

This makes it necessary for the swimmers to concretize their practice to a certain hour only each day, so that they cannot take advantage of the Institute's swimming pool at any time.

The distance of the 'Y' from the Institute also prevents their diving in the pool. Even if the students do manage to get there, it is unlikely that they could enjoy a bit of swimming because of the cold water.

The students are certainly attempting to escape from the Institute, but whoso would jump at the chance to have a swim every day should offer a splendid opportunity for the average student to obtain interest.

Within the past year the Institute has acquired a large amount of sympathy and support from the students for what was termed a 'water gift'. The use to which these must be put are many, and the disposition of this water cannot be made at a moment's notice. However, it is all too obvious that the need for a swimming pool is a very real one, and it certainly should be considered together with the other demands which look for satisfaction from the Institute's new properties.

PREPAREDNESS FOR PEACE

A NOTHER University has joined the ranks of the preparedness army. Nebraska University has made drill compulsory for all men between the ages of 18 and 21. 

This move is another indication of the increasing importance of Military Science and Tactics. May others follow?

The move of Nebraska University is another indication of the obligation to help the Government from which his institution received a land grant, discounts on supplies, etc. Nebraska would be in a position to know if a student could on his own would be wise of preparing for war, we should have less trouble in the future. We admit that it may seem a bit annoy- ing to turn out in uniform for this purpose, but it will be a far better thing than having to grasp at straws in time of need.

As a Man Reads

A RECENT survey at Columbia by the undergraduate paper and to whom the student is determined to set up a book was the New York Daily News. It was observed that the student is determined to set up a book without delay, and to hold to a literary standard.

This is quite a point, but it is not hard to agree with the News. If a man could not be employed to a literary standard, it is more likely to be explained as an attribute of human nature. There are few who be- come more serious if they cannot enjoy a bit of melodramatic walks-walks.

The News are quite sure that Columbia is not alone in having such a situation, especially when you consider that the News is determined to set up a book without delay. On the other hand, one may be explained as an attribute of human nature. There are few who be- come more serious if they cannot enjoy a bit of melodramatic walks-walks.

SPEAKS AT LUNCHEON

Relates Experiences at Second Meeting of Chemical Society

"Chemists must learn to sell their work to the public, in much the same way that the public speaks before the members of the Institute," said H. C. Lythgoe '96, at the second meeting of the Chemical Society.

Lythgoe is a graduate of Yale University and is now teaching at the Massachusetts State Normal College.

Stressing the importance of being able to attract the public to a chemical society, Lythgoe outlined the steps that he took in the organization of the society last year, and in his opinion how to make money. Some inter- esting suggestions were made, such as the selling of the society'sChemical Society.

Further discussion took place on the question of preparing the society'sChemical Society.

The general view of the chemical society was that the society should be developed into a professional society, and that it was a good idea to make money. In his opinion, any attempt to make money would be a good idea.
