The Vail Collection Unique Among Scientific Libraries of World

An exhibit of rare books and pamphlets on magnetism can now be
displayed in the gallery of the Massachusetts Institute of Technology.
It is made up entirely of volumes chosen from the basics of the
Vail Collection. Mrs. Lang, Vail librarian, has so arranged the
books that it will be of great value to both those already familiar
with the subject and those not.

Beginning with a volume written by
Petrucci in 1558 and printed in 1559, the collection-
ary has arranged the exhibit in the sequence
of the various eras of the study of
magnetism. It is not always easy
to trace in the present day the
authors of many volumes whose
existence was long forgotten.

The exhibit is open to the public
during the daytime.

STUDENT UNION MEETING
