ELECTIONS
Nomination blanks for freshmen 
class officers are due in the Informa-
tion Office, Nov. 14, before 2 o'clock. The form is outlined in the 
8.7.4 handbook.

DISLIKES DESTRUCTION OF SCIENTIFIC IDEALISM

(Continued from Page 2)

"Powerful as the utilitarian appeal of science undoubtedly is, it does not 
harm, and I see the highest interest in mankind lies in the fact that the 
world will always find it more in its spiritual interest than in its 
material one."

DISLIKES DESTRUCTION OF SCIENTIFIC IDEALISM

"The greater danger which we have to meet is not the appeal to the 
material world, and the people of the world are not the sort who will 
listen to the appeal of philosophy, but the appeal to the people of the 
world is the greatest danger to the destruction of scientific idealism."

THE COMBINED MUSICAL CLUBS

Annual pictures will be taken at Notman's Studio, Harvard Square, 
immediately at 6. Members will come in 
Tuesday.

FRESHMAN BASKETBALL

ASSISTANTS

chestra will be held tonight at 8 
o'clock in North Hall.

CHEMICAL SOCIETY

There will be a meeting of the 
Society of the Chemical Society, 
November 15 at 4 o'clock in room B-11.

FAULTS IN CASTINGS DETECTED BY X-RAYS

Norton Declares X-Ray Lab 
One of Best in Country

Very few students are aware of the 
fact that the Institute possesses one 
of the finest radiographic laboratories 
in the country, according to Profes-
sor J. T. Norton of the Department of 
Physics. The equipment is enclosed 
within a lead-lined vault so that con-
struction safety is assured at all times 
in the operator. There is a periscope 
balcony, so that observation can be 
made at any time and the angle of 
vision of the device is adjustable so 
that a complete view of the interior 
of the vault can be seen.

The apparatus is an X-ray beam, 
and it is used in conjunction with 
a special camera in photographs 
the interior structure of metal in 
various forms. Prof. Norton, knowing 
the use of its rays and their possibil-
techniques for the work and the 
results of his researches, has 
crediting the electrons in their 
orbits within the atom, while the 
tissue is visible in the constellation 
scars and noses of the universe in 
its proper place with in the 
earth's orbit. The most important 
part of the model is the energy 
that is the source of the X-rays 
that are used in the model. 
Lever, the electrons in their 
orbits within the atom, are 
sufficient to make it one of 
the wonders of our age.

CHESTERFIELD'S POPULARITY

IS SECURELY FOUND ON THE BED ROCK OF SCIENCE

SUCH POPULARITY MUST BE DESERVED

Levy & Myers Tobacco Co.
