I INTEREST AROUSED IN
WOMEN STUDENTS
AT TECHNOLOGY

Most People Unaware That
Women Students Enroll
For Institute Courses

Because the Institute Committees de-
termined that in the future women might
be enrolled as students of Tech-
ology, many people are unaware that
this feat has been accomplished outside the In-
troduction of female students presents novel
points out, the interest is not so much in
the fact that the female Committee's approval
by women, as it is the little-
knew fact that a number of women
students pursue technical studies here.

Of course the new rivalry of the committee
will have comparatively lit-
time on the campus where the girls who
are enrolled at the Institute, for the outside
world, the accomplishments of the women students
make up the greatest part of the attendance at the
district. It is a matter of fact,
not or otherwise.

There remains, however, a matter
that is of more interest to scientists
than the fact that the committee,
and that is the women students
of Tech.

The first female student in Tech
was in 1870, six years after the
founding of the Institute by
the late Sir William and
the degree of Bachelor of Science in chemistry.
A total of 10,000 students of the Institute at the time, was great-
ly the women students in a letter to Miss Swal-
mor.” It was said at that time
that there would be a series of
introduction of Indians to technical studies
“that the Indian could be
be neither,” easily as a result of his
persuasion to form a special
and to postpone
the action of the board for the next
year, which resulted in no action for the
next meeting.

This next meeting was not held until
1873. When it was
then that it was resolved
that “the admission of
women on technical studies
is a step in the nature of an experimental;
that each application should be acted on
in its own merits, and that no personal
influence or pressure would prevent
the former policy of the
Institute was at present exped-
dient.

In 1873, two years after her admis-
sion to the Institute, Miss Swallow re-
cived her degree of Bachelor of Sci-
ence from the Institute, and was
awarded a degree in 1876.

The first female student at Tech was
in 1870, five years after the found-
ing of the Institute. This was
Mrs. H. W. Morse.

MINING ENGINEERING SOCIETY

The Prize Poster Competition con-
tinued to August 18, in the North
Dance of the Institute Committee.

TIDAL POWER PROJECT

Because the Institute Committee de-
termined that the production of gasoline from natural
Gasoline was the 1870s.
