**CITY TUBERCULOSIS SURVEY BY HORWOOD**

Professor Horwood Reports on Survey of Last Summer

Special stress was laid on providing for possible outbreaks by tuberculosis by Professor Murray of Horwood of the Department of Sanitary and Public Health in a report before the Boston Tuberculosis Association according to the Boston Daily Globe.

Horwood, who was a member of the Boston Tuberculosis Association in conjunction with the Sanitary and Public Health Departments, the Boston Health Department, the other medical and public health departments, and the schools and universities, said he thoroughly compiles the summary of tuberculosis statistics and the health crises in the schools and institutions. The large number of cases in the city is not sufficiently realized.

The disease of tuberculosis can be cured for in the summer, he said, but the large number of deaths in the city will probably keep tuberculosis from being completely eradicated.
