Council Favors Making New York National Technology Headquarters

Contemplate the Construction Of a 25-Story Building

(Continued from page 1)

of the Alumni Association, and event-
ually club accommodations. Past Priz-
maker Willard figures the University is in need of such a technological institute,
he said, and it would be a most satis-
factory center for such a building.

He further said that if such a build-
ing were constructed, he would be
willing to contribute to the fund by $500.

Mr. Reindell further said that if the
financing of the building seemed to
be a problem at some time in the future, he and the Corporation really want it
and will do everything in their power
to help carry the plan through.

He predicted that if this plan should
meet with the approval of the Alumni,
the Institute authorities, and the students,
building regional headquarters in New York
would eventually follow.

After Mr. Davis’s presentation, the
floor followed a general discussion in
which disinterested members present,
which as approved by past President
Stratton, warmly endorsed the idea as
now proposed to be a practical
consideration. Further, as the scheme
swung around for a salutary effect upon 
the student body at Bates, President Stratton was thanked for the opportunity to publish his views regarding the
influence of the University in the
community and the progress of the
administration.

In the meantime, Lieutenant Byrd, who
is expected to visit Bates soon, says
that he will be there to talk with the
students about life in the military.

In the opinion of General呈e.
Financial aid to the University is
planned for the purpose of bringing
the students to a better realization of
the problems of the world. The new
state of the University is the same as
that of the world, and the students
are in need of the same kind of
undergraduate independence in journal-
ism and public policy or in their political policies more in touch
with the world at large.

UNDERGRADUATE

MUSICAL CLUBS

As announced on Wednesday, Jan. 6, as
in the last issue of THE ALUMNI
and the College of the City of New
York, the University of New Hampshire

BRAIDED CORDS and COTTON TWINES

SAMSON CORRAGE WORKS

BOSTON.

429 DEVONSHIRE ST.

Simplicity

Simplicity wire and cables, insulated with rubber, paper or varnished
cotton and covered with lead, lead or steel armor, are rendering
great service in the development of the power plant in the central
district of the country.

A new course covering the whole
field of sciences has been organized at
the University of New Hampshire, the
cooperation of all departments, the
selection of the best instructors in the
various sciences and mathematics, and will be offered in the present
as well as the future term.

The aims of the courses are to cover
the whole field of sciences, showing
the various sciences, in a unified view of
their relations to each other and to
other sciences, and to survey briefly
each department and to place on a
comparative basis the general
methods of scientific inquiry.

N O T I C E S

The new board aims to be intelli-
gent in their work, and to remain independent
of them.

The opinions of the Board of Directors and of the
Public are expressed in the last issue of THE 
MUSICAL CLUBS.
