of special interest to the layman Is the announcement the American Society of Arts that Charles M. Spofford '93, Hayden professor of Civil Engineering at the Massachusetts Institute of Technology, will undertake the third Popular Science Lecture on "Engineering—The Foundation of Modern Civilization." The lecture will be given on Wednesday, February 16, at 8:15 o'clock in the Great Hall on the campus of the Massachusetts Institute of Technology. Dr. Spofford will speak on the subject of engineering as the basis of all progress and civilization, and its influence on the development of modern society. The lecture is open to the public, and reservations may be made at the office in Walker. This concert will be-}

In choosing to speak on Engineering Technique, Dr. Professor Henri has for some years been particularly interested in the study of the structure and properties of molecules as shown by absorbance spectra. In his lectures he will begin with the presentation of his latest research, and from an experimental standpoint he will show how the molecular structure of the substance can be found by the study of the absorption spectra. Professor Henri's work is of especial interest to those who are engaged in the study of the structure and properties of molecules. His researches have been published in the most important scientific journals, and have been widely praised by his colleagues. The lecture will be given in the Lecture Hall on the campus of the Massachusetts Institute of Technology, at 8:15 o'clock on Wednesday, February 16."
