United States. She will be remembered as one who made the women in her charge feel that they too, although kept from the outside world, were part of the social units of the city, and that they were as important a factor in the social stability of Boston during the conflict as were the soldiers who returned there as colonels from Peace. Mrs. Hodder will also discuss the Association concerning the woman offender at the present time.

MENTAL DISEASE CAUSES CRIME

One of the most thoroughly studied and comparatively recent topics that society, as a whole, places in the forefront is that of mental diseases which are only partially responsible for his criminality but which may have much to do with the making of a criminal. Dr. William F. Dodson, Director of the Laboratory of Mental Examinations of Prisoners in the United Department of Mental Diseases, is associated with a department that was a pioneer in this field, and will present a paper on the significance of psychological examinations of prisoners.

The last subject for discussion at this session is that of insurance and has to do with the financial arrangement of the University. A staf of a department of business administration which will be presented by Sanford Bates, State Auditor.

POP CONCERT DRAWS A CAPACITY CROWD

(Continued from Page 1)

Distracting somewhat from a full appreciation of the program of the evening were the good-natured remarks of the crowd at the back of the hall, in favor of a large number of people in attendance during the concert.

Eastman Expert Shows Chemists Color Photographs Explained By Research Man at Meeting

Color photography was the subject discussed at the last meeting of the Northwestern section of the American Chemical Society, which was held Friday evening in Room 4-320. Mr. Eric E. Matson, of the Research Laboratories of the Eastman Kodak Company at Rochester, was the lecturer, and in an hour-long address outlined the science and art of color photography in a manner which it has not been possible to do until now.

Since the days of Daguerre the photography industry has grown to rank among the first ten of the world's great industries. Color photography received its initial impetus in 1922 with the development of half-tone three color plates. Since then the beauty of the 20th century's considerable progress has been made along this line, largely through the independent efforts of the various manufacturers of photographic materials. The scientific institutes and colleges have spent millions on this project, not as a part of the development of color photography, but as an effort to get products that are superior to anything that is in existence. In the last few years, however, it has been realized that the competition for opinion both as to what happens in color photography and how good results may best be obtained.

CHRISTIAN SCIENCE SOCIETY

There will be a business meeting of the Christian Science Society in Room 4-121 today at 5:15.
