R. O. T. C. Companies Compete for Banner

Which company of the fresh- man infantry was the first to fire? Which company has been able to maintain the family for the longest time? Which company has the best drill? It will be in the rifle match that the honors will be decided, since the companies are encouraged by the commandant to show their best at the designations.

This guide will continue with the competition for more than a year although the personnel will change. It is hoped that all companies will be present at the company which performs their best. The commandant will offer no further instructions on the regulations until after the drill and part of the inspection.

Senior Signups Come Out Today

Sales Drive for Class Function Continues till Thursday

In the Main Lobby and all in the Senior Room, members of the Senior Week Committee are interviewing students today as the start of the annual Senior Week begins. A member of the committee, who will have to be present only until Thursday for the meetings, will be available to handle the students who need help in arranging the required part of the program.

Last week several advanced signups were made, and the results of the week will be determined by the number of students who requested the large sale of basketball tickets. Rank number of the Senior Week Committee should have been appointed to assume a certain share of the responsibility, but it is not restricted to that grade.

Two New Men On Committee

The class of 1930, in addition to the senior committee, has also done its part in the planning of the event. Two new members, Frank C. Stepler '30 and David R. Knox '27 have been elected to the committee and will serve with the class in the planning of the affair.

The difficulty of the event, which is not to be underestimated, has called for the appointment of these two men. Each has had his share of visitors who appeared to be using the outside of the building.

Research Experts in Radiotelephony Speak Here Today

Many Features of Linking Wire Systems With Radio Will Be Explained

"Long Distance Radiotelegraphy is a Layman's Problem," said the General Manager of the Electrical Engineering Department, a prominent expert in the field of radiotelephone.

At the last meeting of the National Association of Radiotelephone Engineering, Mr. Emidelberg was introduced as the person responsible for research and development work on insulating oils and transformers, and a prominent expert in the field of insulating oils and transformers.

In the course of his brief address, Mr. Emidelberg explained the necessity for a constant supply of reliable insulating oils and transformers. The insulating oil, he said, is an essential component of any electrical system, and the transformer is an indispensable part of our electrical system.

He then went on to say that the research and development work on insulating oils and transformers has been made possible by the cooperation of the manufacturers.

"In conclusion," he said, "I would like to thank the manufacturers for their cooperation and for the opportunity to speak here today."
