responsible representatives

It is unfortunate that certain individuals in the undergraduate body have in the past failed to realize the importance of the Institute Committee in regard to the affairs of student life. Apparently a great many of us have not thought of the fact that the Institute Committee is proud that its undergraduate affairs are entirely handled by students working on the Institute Committee and its sub-committees. This fact of free undergraduate government is often disregarded and little thought given to its advantages. Many colleges throughout the country have been subjected for years to the supervision of the Faculty in regard to their student bodies, and remain under the same supervision in years to come. Our student government is an advantage of which Technology as a whole is benefitted.

We should not fail to realize the responsibility connected with the management of our own student affairs. We are therefore very keenly disappointed when we hear of certain undergraduates who slack the affairs to which they have been chosen, who do not work in good faith by their classmates. A seat on the Institute Committee is never a personal matter for such members are chosen to this Committee as will make it truly representative of the student body and the several activities in which this body is interested. When one of these delegated representatives fails to appear at meetings he is depriving the particular group which he represents of a voice in its own particular concern.

At the meeting of the Institute Committee held last evening it was found advisable to deprive one individual of any future seat on the committee due to his tardiness in appearing at meetings. This action was taken because this man had been absent from the meetings for a number of times and had on other occasions presented proxies, the number of which we feel is too great. We hope that the new Institute Committee, coming in at the next meeting, will be able to come up under the charge and control of an entire body of responsible students so that a repetition of this punishment will not be found necessary.

A NEW REFORM NEEDED

It is some time since THE TECH has had recourse of capital magnitude. It has been on our mind for a long time that something about the attitude toward capital begging, but what this something was no one knew. At last it has come to light. It is concerned with a less than a matter of the design of the Institute buildings themselves. Money has been invested in helping to design the buildings and perfection itself, will be interested to learn of this startling revelation. Its significance is felt daily, yet, even hourly, by countless numbers of Technology students. But the remarkable fact is that few have been aware of it. This needed reform is but just a minute, we must prepare the measure by a preliminary re-

play directory

in the first place, it is undoubtedly true that the majority of Technology men are right-handed: a very significant point in the light of the facts to come. Secondly, the majority of men carry their books in the left hand; another important point to remember. Now to the situation.

whenever one of this right-handed, carrying-books-in-the-left majori-
yty, he is walking in water, he is carrying his books on the right hand, or secure his water by means of a dexterous contrac-
tion of the right arm, by which the right elbow assumes the logical point of support. He is thus sunk by the simple expedient of clinging him on his right shoulder.

The evil is no less than this: all the bubble faucets are on the wrong side of the bubble. What are we going to do about it?
